Belleville South Solar Project

Project Description Summary
(This summary should reflect the description in the documents upon which consultation has been completed and if it does not, the difference should be highlighted)

The proposed facility is a 10 MW solar generating facility, located in the City of Prince Edward County. The project will generate electricity using photovoltaic panels mounted on fixed racking structures, with in-ground foundations. Direct current generated by the panels is converted to alternating current by inverters and stepped up to intermediate voltages by a transformer. Alternating current is routed to a main facility substation where it is stepped up to distribution line voltage. A short distribution line is used to connect the facility into the existing distribution grid. Other project components include access roads, a control building and site fencing.
